

## MANAGEMENT OF PERI-IMPLANT DISEASE

14 HRS  
CPD

# MANAGEMENT OF PERI-IMPLANT DISEASE

14 HRS  
CPD

*Combination of lectures, hands on and live patient demonstration*

## **DATES**

Friday 23rd July 2027  
Saturday 24th July 2027  
Registration from 8:30am  
Course 09:00 – 17:00

## **FEES**

\$2650 (gst inc)

## **VENUE**

Dental Artistry Academy  
Training and Education Centre  
Level 1/38 Broadway, Newmarket,  
Auckland

With the increasing popularity of dental implants and an estimated 25 million implants placed annually the number of patients with dental implants in general practice is ever increasing.

With this increase in implants comes an increase in peri-implant disease. It is estimated peri-mucositis and peri-implantitis may be as high as 50% of all implants today. The key to managing peri-implantitis lies in primary prevention of the disease and careful surveillance of implants.

This means dentists have a critical role in combating the tsunami of peri-implant disease. This course teaches general practitioners the latest understanding of aetiology and pathogenesis of peri-implant disease. It provides clear guidelines on implant maintenance requirements and protocols for non-surgical therapies at the earliest onset. In many cases implants will require surgical intervention of either implantoplasty, soft tissue grafting, hard tissue grafting or a combination approach. The course will help general practitioners direct their patients to timely surgical management where indicated or they may also consider providing the surgical care with prior periodontal plastic surgical experience.

Fellow of Royal Australasian College of Dental Surgeons, International Dental Implant Association and International Academy of Dentofacial Esthetics.

Dr Sheng Zhang is a general dentist with a special interest and practice limited to periodontics and implantology. He has studied extensively around the world learning from the leaders in the field. Dr Sheng is a published author, and his thesis was on Albumin Concentrated Growth Factors (Alb-CGF) in the sinus lift procedure. He has developed novel techniques with the use of autologous blood concentrates as an adjunct to guided bone regeneration.

Dr Sheng has specifically designed this course for those who are embarking on their periodontal education or those clinicians wishing to develop a deeper understanding of Periodontics.

## Dr Sheng Zhang

Dental Artistry Practice Principal

*BDS (Adel), BOH (Syd), MDSc Periodontics/Implantology (UJI), GradDip Orthodontics (JCU), FRACDS, FIDIA, FIADFE*

### Day 1:

Friday 23rd July 2027

- The biology, aetiology and pathogenesis of peri-implant diseases
- The latest evidence based approaches for implant maintenance and prevention of disease development
- The use of Cumulative Interceptive Supportive Therapy (CIST) in daily practice
- The Bern University implant maintenance protocol
- When surgical intervention may be required

### Day 2:

Saturday 24th July 2027

- Understand the different surgical treatment options including Implantoplasty, soft tissue and hard tissue grafting
- Demonstration of GalvoSurge
- Explore cases studies of peri-implant diseases and their extensive management plans
- Hands on training using implant models for the delivery of implant surface decontamination and soft/hard tissue grafting
- Live patient surgery for management of peri-implantitis

### Learning outcomes for NZDA

- Develop a deeper knowledge of the biology, aetiology and pathogenesis around peri-implant disease
- Understand the role of the dentist in prevention and management of peri-implant disease .
- Demonstrate an ability to apply clinical protocols for implant maintenance in the general practice.
- Identify cases which require surgical intervention and recommend appropriate care.
- Explore the latest techniques and technologies for decontaminating failing implants.
