

FULL MOUTH RECONSTRUCTION AND TMD WITH DR ŁUKASZ LASSMANN

21 HRS
CPD

THREE DAY WORKSHOP
6TH-8TH NOVEMBER 2025

Join us for a comprehensive three day course on full mouth reconstruction with Dr Łukasz Lassmann. The course is a combination of lectures, hands-on workshops and pre-course webinars, covering the full mouth reconstruction process from start to finish.

FULL MOUTH RECONSTRUCTION AND TMD WITH DR ŁUKASZ LASSMANN

21 HRS
CPD

3 Day Seminar & Hands-on Workshops

DATES

Thursday 06/11/2025

Friday 07/11/2025

Saturday 08/11/2025

FEES

Standard fee: \$6000

Early-Bird Fee: \$5000

*Booked and paid prior
to 31/05/2025*

VENUE

Dental Artistry Academy

Training and Education Centre

Level 1/38 Broadway,
Newmarket, Auckland

Full Mouth Reconstruction is a training program that provides comprehensive knowledge on bite reconstruction. You will receive a series of webinars to watch prior to the course which include topics on vertical occlusal dimension, Centric Relation – Total War, Radiology in TMD – Basics, and Articular discs.

You will see how to register the bite during preparation for cross-mounting and the secrets of bite equilibration. You will learn facebow registration, leaf gauge registration, lucia jig, kois deprogrammer, how to perform Dawson's maneuver, how to register the bite for an occlusal splint, what the original LIP technique is, and how to make your own deprogrammer and the decision tree for full mouth reconstruction!

How to deal with a gummy smile? When to use veneer and when to crown? Shoulder vs shoulderless? What is mock-up preparation? What are the protocols for the preparation and cementation of crowns and veneers? How to perform advanced dental photography? Nobody will leave the course without knowing the answers to these questions!

Dr Łukasz Lassmann

Łukasz Lassmann is the founder of Master Level training center and cofounder of the Dental Sense clinic and head of medical team. He is a member of the Polish Academy of Aesthetic Dentistry and the International Congress of Oral Implantologists. Since the very beginning of his professional career he has specialised in aesthetic dentistry, full mouth reconstructions and TMDs in cooperation with dental physiotherapist. Training around the world (University of North Carolina, USA; University of California Los Angeles, USA; Kois Center Seattle, Mediterranean Prosthodontic Institute, Spain) gave him opportunity to finally spread his knowledge around the world (Peru, Dubai, India, China, Egypt, Romania, Poland) with his Master Level program. Dr. Lassmann places particular stress on minimally invasive treatment techniques, which allows the dentist to preserve as much dental tissue as possible. He is a strong propagator of microscopic dentistry and holistic, multidisciplinary approach combining different occlusal philosophies with particular respect to posture and breathing. His diligence and passion for his work are evident in the smiles of his patients, who he photographs with great pleasure.

Pre-Course Webinars

Webinars are pre-recorded and available 2 months prior to the course.

- Centric Relation - Total War
- Radiology in TMD - Basics
- Articular Disc - Bipolar "No" Friend
- + 2 Online Courses - MiniFMR and TMD Map of Pain and Examination

Day 1 – Thursday 06/11/2025

Occlusal Philosophies - In Search of a Common Denominator

- How has the approach of occlusal philosophies changed in terms of tooth guidance and its impact on bruxism TMD (Temporomandibular Disorders)?
- The impact of improper occlusion on TMD- correlation or causative relationship?
- "Complicated Relationships between Anterior and Condylar Guidance and Their Clinical Implications" (Lassmann et al.)
- "Sagittal condylar guidance angle measurement methods: A systematic review" (Lassmann et al.)
- Is the use of fully adjustable articulators and a facebow really necessary to achieve proper prosthetic reconstruction?
- Controversies regarding centric relation from the perspective of diagnosis and therapy.
- In search of a common denominator between different occlusion philosophies.
- What are the limitations of articulators, and can we truly design prosthetic reconstruction that never require adjustment in occlusion?

Understanding Orofacial Pain & TMJ- what a prosthodontist should know

- What is pain? How can a dentist correctly diagnose orofacial pain and assess whether it is treatable? How does the source of pain differ from the location of pain?
- How to conduct an interview with a patient suffering from pain.
- Disc pathology - how to differentiate it and when intervention is necessary
- How to distinguish between locks of muscle and articular origin
- Synovial pain map of the temporomandibular joint
- Radiological picture of disorders of the temporomandibular joint

Workshop - TMJ and Muscles Examination

Bite Registration - Make It Easy

- 5 different condyle positions - Do we need a centric relation?
- What the guidelines and professional ethics say in relation to the current state of scientific knowledge.
- Leaf gauge - What is it? When / should I use it? How to use it?

Leaf Gauge Workshop

Day 2 – Friday 07/11/2025

SDS concept in multidisciplinary treatment

- SDS Concept - How can we simply determine correct Vertical Dimension of Occlusion on the basis of Smile Design and knowledge of a space required for specific materials.
- Treatment planning in severe attrition and gummy smile
- Cooperation between prosthodontist and orthodontist in cases with deep bite and gummy smile
- Orthodontic pretreatment in class 3 patients who require full mouth reconstruction.
- What the guidelines and professional ethics say in relation to the current state of scientific knowledge.

Vertical Occlusal Dimension Mythology and Severe Attrition Treatment

- Vertical occlusal dimension - what are the limitations ? Should we be "that" precise ?
- Bite registration in severe wear cases
- What is the ferule effect and which part of the tooth is the most important?
- Biomechanics of damaged teeth
- What type of crown-root post to choose? Standard, fiberglass or cast post?
- Shoulderless preparation. Why ? How ? When ?

KOIS DEPROGRAMMER, Lucia Jig, DAWSON MANIPULATION and splints - When? Why? How?

- “Deprogrammation” - a Necessity to achieve CR or Pseudoscience?
- Kois deprogrammer - how to determine the height of the platform
- Bite registration on the deprogrammer
- Incisal Pin (LIP Technique)
- Dawson’s manipulation
- How to verify the correctness of registration
- Nightguard/splints - when, what material? How to register the bite for the splint?
- What contacts and guidance should we achieve on appliance? Delivery and relining.

Workshop - Kois Deprogrammer, Dawson Manipulation

Day 3 – Friday 08/11/2025

Cementation

- Rubber dam – split dam or full insulation?
- How to cover metal posts to maintain proper aesthetics.
- Secrets of cementing crowns
- Protocols for cementing and cleaning ceramic veneers

How to get a perfect bite for our patient?

- What is equilibration? When do we use it and when is it not allowed to do so? P1, P2, P3
- Differences between equilibration in MIP and in CR.
- Electronic bite analyzers - T-scan and OccluSense
- When to perform equilibration and when to increase the occlusal vertical dimension ?
- Equilibration of interference during chewing
- Equilibration in static and chewing - video step by step
- Occlusion on implants

Algorithms and Decision Tree for Full Mouth Reconstruction

- When not to change the existing bite?
- When should we choose a tool to make bite repeatable and easy to register? Which tool should we choose?
- Step by step journey throughout all the appointments and FMR algorithm
