

THE COMPLETE MAXILLARY SINUS LIFT COURSE

21 HRS
CPD

This course is designed for those who have experience in surgical implant placement and would like to expand their knowledge and skills to allow for the management of more complex cases requiring maxillary sinus lift procedures. One third of all teeth lie under or are positioned adjacent to the maxillary sinus. Its mastery is essential for the implant surgeon to provide the broad spectrum of dental implant procedures for their patients.

THE COMPLETE MAXILLARY SINUS LIFT COURSE

21 HRS
CPD

3 Day Surgical Training Course- Transalveolar and Lateral Sinus Approaches
4 months of post course support including 4 monthly tutorials and complimentary review of cases

DATES

Thursday 23/09/2027
Friday 24/09/2027
Saturday 25/09/2027

FEES

Registration fee: \$4250 inc GST
Earlybird \$4000 inc GST (registered
and paid prior to 30/06/2027)

VENUE

Dental Artistry Academy
Training and Education Centre
Level 1/38 Broadway,
Newmarket, Auckland

This course is designed for those who have experience in surgical implant placement and would like to expand their knowledge and skills to allow for the management of more complex cases requiring maxillary sinus lift procedures. One third of all teeth lie under or are positioned adjacent to the maxillary sinus. Its mastery is essential for the implant surgeon to provide the broad spectrum of dental implant procedures for their patients. The program is a combination of lectures, hands on workshops and live surgeries so clinicians leave the course confident to provide sinus lift procedures immediately.

This unique course will cover all aspects of patient assessment and most importantly the decision tree for the various sinus lift procedures available today. The first two days focus on the principles of maxillary sinus lifts and will cover future site development at the time of extraction (Jensen & Block Techniques) as well as the various transalveolar sinus lift procedures. These procedures include Summers Osteotome, Cosci reamers, Hydrodynamic piezoelectric internal sinus elevation (HPISE), hydraulic elevation and Osseodensification using Densah® bur techniques. Mastery of these skills will allow the clinician to manage the majority of cases requiring maxillary sinus lifts.

The third day will help clinicians to understand and embark on lateral sinus floor elevation techniques. Classic window techniques using complete osteoplasty, hinged/trap door and piezoelectric saw techniques will be covered however a focus on minimally invasive surgeries to prepare single sites will be the focus of the third day using the PIEZO and DASK systems.

The course importantly covers all facets of complication management.

Fellow of Royal Australasian College of Dental Surgeons, International Dental Implant Association and International Academy of Dentofacial Esthetics.

Dr Sheng Zhang is a general dentist with a special interest and practice limited to periodontics and implantology. He has studied extensively around the world learning from the leaders in the field.

Dr Sheng is a published author, and his thesis was on Albumin Concentrated Growth Factors (Alb-CGF) in the sinus lift procedure. He has developed novel techniques with the use of autologous blood concentrates as an adjunct to guided bone regeneration.

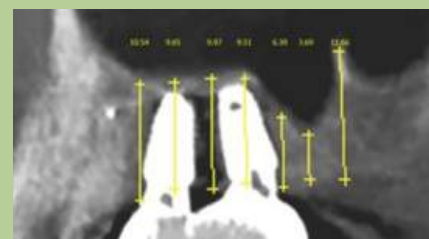

Dr Sheng Zhang

Dental Artistry Practice Principal

BDS (Adel), BOH (Syd), MDS Periodontics/Implantology (UJI), GradDip Orthodontics (JCU), FRACDS, FIDIA, FIADFE

Day 1

- Principles of maxillary sinus lift elevation
- Site assessment and sinus evaluation
- Decision making process for maxillary sinus lift approaches Biomaterials in the sinus lift procedure
- Future site development under the sinus (Jensen/Block sinus development techniques)
- Transalveolar sinus lift procedures including:
 - Summers Osteotome
 - Cosci bone reamers
 - Hydrodynamic piezoelectric internal sinus elevation (HPISE)
 - Osseodensification using Densah® drills

Day 2

- Complications management associated with and following transalveolar sinus lifts
- Workshop: Hands-on workshop using various techniques taught on day 1 on maxillary sinus models
- Live surgeries: Transalveolar sinus lift procedure

Day 3

- Site assessment and surgical approach for lateral sinus floor elevation procedures
- Complication management associated and following lateral sinus lifts
- Modern minimally invasive lateral sinus lift procedures
 - The DASK technique
 - Piezoelectric lateral window techniques
- Workshop: Egg exercise and hands-on workshop on maxillary sinus models
- Live surgeries: Lateral sinus lift procedure
